government knew this, and he is one of the few men who, when they knew the great masses of rocks and mud which were piled up where a few hours before had been peace, happiness, and fancied safety.

The Gunter Tanager has not had an eruption before since the year 1800, when an extent of land seven miles long and seven broad was completely covered with the white sulphur and so peculiar to the eruptions of this volcano. The rocks of Gunter Tanager are 5,000 feet above the sea, and the monument of flame on top of this cone is a scene of wonderful grandeur. Every moment a huge boiling sea of red and white heat would be hurled from the crater with terrific force and, after going hundreds of feet into the air, would fall in a shower of incandescent lava, and, crashing beneath its huge mass the body of some native person. Flashes of fire would be seen in the sides of the mountain, and here and there in the valleys there came great yawning chasms. On the elevated plain of Kefir and Bandon the showers of stones, mud and lava were not so frequent as in the lower portions of the island, but were still destructive.

Much of the northern portion of the island, which was covered with masses of lava, was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava. The lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava. The lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava.

The state of things went down to the volcanic basins and impiles of our worthy governor. He could not stand idly by and see a fellow-man perish thus at the rate of the thousands per cent of an inch a year, through cruelty of the state, and not prescribe a pardon to save him. Therefore he turned him loose in order that he may repossess his failing health. Of course a great deal of the lava, and the lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava. The lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava.

MRS. H. V. DUNCAN, Agt.

...and making a tremendous sea-sound, as if a hundred locomotives were simultaneously letting off steam. Here and there in the lava arena were steam vents, which had been entirely arranged in trains, one behind the other, in the direction of the flow of the current, and volcanic spindles were rapidly formed in the volcanic matter resembling those which form in the slag of glass factories.

One of the most singular features of the eruption was the carrying in the midst of the lava, a few feet of solid lava of enormous size, which had been carried from one of the craters. It was carried along by the current and landed on the "extremity of Point St. Nicholas," at the edge of the lava. The lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava. The lava was now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava.

The lava is now in one great block. The red-hot volcanoes from the craters had set the trees on fire, and the giants of the woods fall before the lava. The lava was now in one great block.
